BOLDIC Award 2013

Distance Education Study Centre of the Riga Technical University, Latvia is the winner of BOLDIC Award 2013 for the innovative project work done during Ebig3 project. This project combines a wide coverage of TV technology and a wide use of mobile technology with the capacity and flexibility of broadband. This allows a learner to use a single delivery channel at a particular time, depending on availability and preferences, or a complementary combination of two or three delivery channels thus supporting learning anywhere anytime.

This is an innovative project of open and distance learning. The Ebig3 project (http://www.ebig3.eu) uses not only traditional Internet based systems but alsoTV and mobile technologies.

The developed solutions includes integration of technical issues for cross-media learning content delivery, refinement of pedagogic considerations, development of shared understanding of target user learning contexts in border areas, production of learning content & organizing course pilots. The projects strategy and soloutions can be scalable over the whole Nordic and Baltic region.
