Kort sammanfattning om magnitud:

The Spider is a searchmotor that is specifically made for educators and students to easily search for digital materials for school work. One can insert the spindle on your website.

The spider is searching in multiple archives but is limited to archives containing materials for school work. The search is performed in the papers where all resources are marked in a uniform way which gives good accuracy. Through the spindle one can access such resources from Utbildningsradions media archives and Länkskafferiets archives. Since August 2012, including resources from the vast international archive Learning Resource Exchange (LRE) are searchable in the spindle. Responsibility for the quality and access lies with the owner of the material.

The Spider has cooperation with several operators. The technology behind the Spider was developed by Umeå University in collaboration with the National Agency for Education. Their partners are continually working to connect more archives to the Spider. Actors who are interested to make their digitized material available through the spider can contact the National Agency for Education.

Translation from the webpage above

Argument för nominering:

The Spider is an extra ordinary service for OER for schools. The Spider search efficiently in several archive in all kind of subjects and resources. The Spider is used in many schools and by teachers and learners. The Spider could easily be integrated in the schools own webpages
